

# ARIA

- aria-disabled
- aria-autocomplete
- aria-hidden
- aria-invalid
- aria-label
- aria-placeholder
- aria-describedby
- aria-details
- aria-activedescendant

```
<div aria-label="Tag" role="combobox" aria-expanded="true" aria-owns="owned_listbox" aria-haspopup="listbox">  
  <input type="text" aria-autocomplete="list" aria-controls="owned_listbox" aria-activedescendant="selected_option">  
</div>  
<ul role="listbox" id="owned_listbox">  
  <li role="option">Zebra</li>  
  <li role="option" id="selected_option">Zoom</li>  
</ul>
```

HOW

# Changing Focus with JS

- Always pause for 350ms-500ms between focus events.
- Make sure objects are fully loaded before focusing
- Best to build a helper function
